Regrinding service

Regrinding service for Bending tools

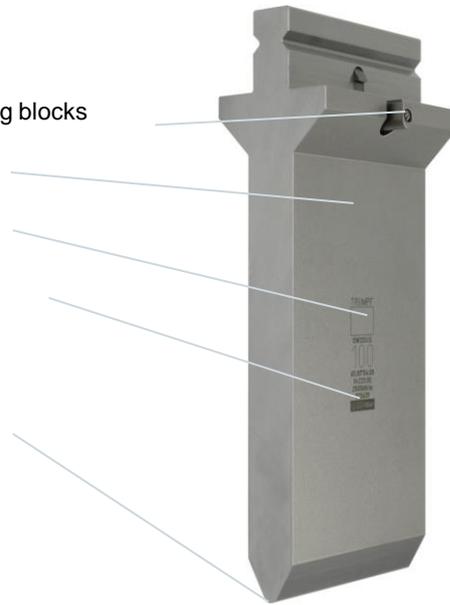

Bending tools perform precise heavy-duty work. The continuous load can eventually leave traces of wear on the tools, even in extremely durable working areas. Send us your bending tools for regrinding - they will be returned to you in optimum condition, ready for consistently high-precision bending results. We also provide you with the new 3D data of the ground tools

Your advantages at a glance

- Ensuring functionality and safety by regrinding individual pieces and sets, along with providing the updated 3D data through the download platform.
- For tool segments where individual pieces can no longer be supplied, they can be immediately replaced with new ones.
- ACB sensors can be reground together with the stamps.
- New tool data is not delivered via USB stick but is available online via MyTrumpf, ensuring interchangeability.

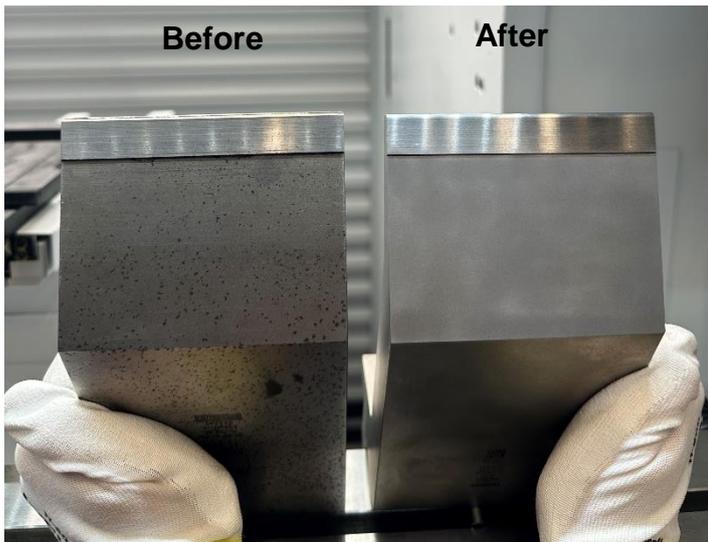

This is what the Regrinding service includes:

- ✓ Renewing the Safety-Click, retaining and roll pins, as well as sliding blocks
- ✓ Surface cleaning
- ✓ New labeling
- ✓ Updating tool data (tool height) and 3D data
- ✓ Grinding and hardening
- ✓ Mounting and adjusting the ACB sensors
- ✓ Preservation, original packaging

Contact your contractual partner today and arrange an appointment to regrind your tools. If you have any questions, you can reach us via the following e-mail address:

TAT_BWZ_Orders@trumpf.com

Additional information:
